Other	10

COHORT 2

October 2021-June 2022

Results from Clinical Arm of AYA-BH CoIN

Collaboration

Collaboration with Mental Health Professionals

82% of practices collaborate with mental health professionals

35% of practices have co-located or integrated mental health

Collaboration with Community

39%

have relationships with schools for referring youth with depression

57%

would like to develop relationships with mentoring programs

Practice Changes

- Began universal depression screening starting at age 12
- Screened youth for depression at non-well visits (e.g. acute, chronic care)
- Developed standard screening workflow
- Improved documentation of depression screening results in patient chart
- Incorporated reminders to screen for depression (e.g. EMR prompt, pre-visit planning)
- Defined processes to monitor follow-up for youth with positive depression screens
- Began screening for suicide

Practices' Needs

Community Resources

- Up-to-date list of mental health providers, family and peer support programs, youth recreation and mentor programs
- Relationships with school and community based providers of services for mental health concerns

Support for Youth and Families

- Posters, handouts, brochures, and social media content that promotes the importance of mental health
- Tools to gather feedback from youth and families on quality of care

Support for Clinicians

- Convene primary care, school, and community providers to promote collaboration in caring for youth with depression
- Establish mechanisms for on-going collaboration with primary care to address youth mental health

Prepared by the National Improvement Partnership Network (NIPN) for the Title V participants in the Adolescent and Young Adult Behavioral Health CoIN (AYA-BH CoIN).
